

Guilherme Silveira

"Brazilian generative magic where algorithms create impossible choices"

Mentalism

Biography

Guilherme Silveira is a Brazilian computer scientist, mathematician, educator and magician exploring what he calls generative magic. His performer-controlled site explains how algorithms, constraint programming and language models can generate or structure magical outcomes without live human intervention, and documents two Fool Us performances as the program's first Brazilian magician. Silveira is also a founder and education executive in Brazil's technology-training sector, making his magic an extension of a broader teaching and research practice. The evidence supports current speaking and creative activity but not a conventional private-event booking offer, direct booking contact or specific home city.
